

## f12 bet saque minimo

Anxiety changes brain chemistry, and makes it easier for the mind to focus on the negative. You're not only more likely to have a scary thought when you have anxiety — you're also more likely to focus on the thought, have the thought cause more anxiety, and ultimately have more scary thoughts in the future.

[We have a brain that processes information very deeply and feels emotions very vividly, compared to other people](#). This trait is linked with many good qualities — empathy, creativity, and giftedness among them — but it also means we experience unsettling scenes very differently than other people.
